Assessment Guidance

| 1. Eliminate | Remove the hazard wherever possible which negates the need for further controls | If this is not possible then explain why | 1 |
|------------------------|---|--|---|
| 2. Substitute | Replace the hazard with one less hazardous | If not possible then explain why | 2 |
| 3. Physical controls | Examples: enclosure, fume cupboard, glove box | Likely to still require admin controls as well | 3 |
| 4. Admin controls | Examples: training, supervision, signage | | 4 |
| 5. Personal protection | Examples: respirators, safety specs, gloves | Last resort as it only protects the individual | 5 |

Risk process

- 1. Identify the impact and likelihood using the tables above.
- 2. Identify the risk rating by multiplying the Impact by the likelihood using the coloured matrix.
- 3. If the risk is amber or red identify control measures to reduce the risk to as low as is reasonably practicable.
- 4. If the residual risk is green, additional controls are not necessary.
- 5. If the residual risk is amber the activity can continue but you must identify and implement further controls to reduce the risk to as low as reasonably practicable.
- 6. If the residual risk is red <u>do not continue with the activity</u> until additional controls have been implemented and the risk is reduced.
- 7. Control measures should follow the risk hierarchy, where appropriate as per the pyramid above.
- 8. The cost of implementing control measures can be taken into account but should be proportional to the risk i.e. a control to reduce low risk may not need to be carried out if the cost is high but a control to manage high risk means that even at high cost the control would be necessary.
